Description

FAAC 640 Automatic barrier

- The 640 range of barriers is ideal for traffic control in areas with particularly high use for beam length ranges from 4 to 7 metres.
- Bottom skirts can be fitted to all lengths and a top and bottom skirt arrangement is available for beams up to 5 metres

- The 624 BLD control board has surface mount technology with a 2 digit display and 3 programming buttons - this allows simple settings of the operational parameters and enables selection of a wide range of logic functions including customised logic
- A standard setting on the board allows for a pair of barriers to work simultaneously
- Perfectly calibrated stopping thanks to the adjustable electronic brake that slows down closing and opening movement
- The control board activates a cooling fan when necessary allowing the barrier to operate continuously
