Description

FAAC SLHP Programmer

- **Features**

- The programmable option for the FAAC SLH allows programming of the radio system codes via the hand held SLH programming unit plugged into the Decoder SLHP; the Radiocoder allows programming of the transmitters. The SLH programming unit in turn can be connected to a PC for programming and management of customers' codes allowing transmitters to be added and deleted from the system.
- The programmable system uses the same receiver and transmitters as the non programmable system. The Decoder SLHP has a memory capacity of 2000 codes (with MEX SLH expansion chip added) and a slot for connection to the SLH programming unit.
