Description

RESIST An access control device able to store codes and/or cards. It manages an entrance by controlling its status (open or closed). It may generate an alarm in case of a non authorised attempt at opening. It works autonomously ("SA" means stand alone) with no external management board or programming PC. Codes/cards archives - can be copied by a removable memory (optional). RESIST SA (reader A - master) is able to manage a second RESIST (reader B - slave). This configuration allows area management - to have one entry/exit gate with anti-pass-back feature. Configuring and learning of codes and/or cards are managed by keypad and/or self learning mode with cards kit.
