Description

FAAC GBF1500-1600 (MPN 105565) Balanced door operator.

- The GBF1500 balanced door is characterised by its opening movement, with simultaneous rotation and retraction of the door leaves; this makes it particularly suitable in environments that do not allow installation of traditional horizontal sliding doors and that must still comply with regulations on anti-panic safety exits.
- Automatic balanced door with integrated anti-panic system.
- Suitable for environments that do not allow the installation of the traditional horizontal sliding doors.
- Available in two versions: framed leaf or glass leaf.
- Patented product.
- In an emergency the hinged doors open wide laterally and immediately - freeing up the passageway as much as possible - automatically closing and resuming normal operation after an adjustable period of time.
- Strong extruded aluminium - moving parts run on ball bearings and leaves are made of 10mm thick tempered glass.
