Description

**FAAC TK50 (MPN 105560)**

- FAAC TK50 door profile.
- TK50 for automatic entrances with increased section profile of 50 mm.
- The sturdiness of these profiles and their innovative design make these ideal for automatic entrances for installation in areas of high volume traffic where trolleys or suitcases may be present.
- The TK50 profiles are designed to be perfectly integrated with a break-out anti-panic system for applications requiring an emergency exit.
- Thermal insulating and burglar-resistant labyrinth profiles.
- Accident-prevention rounded profiles with heat-resistant central striker seals and heat-resistance brush between leaf and floor.
- Striker seal designed to facilitate the break-out ability of the sliding leaf.
- Complete with glass-retaining profiles and gaskets to house glass panels up to a max thickness of 32 mm.
- The base is 141 mm high and an internal seat houses the brushes for the thermal insulation and the sliding rails of the floor sliding block.
